

Welcome

About Retradeables

Retradeables is the first used F-gas marketplace. Created with a mission to leverage technology and innovation to establish a transparent and competitive marketplace for the buying and selling of used F-gases across Europe. The Retradeables platform offers a responsible alternative of a viable circular economy for used F-gases.

Funded and supported by the EU, Retradeables is the only online platform where the industry can connect to recover, recycle and reclaim their own F-gas supplies or to trade recovered F-gas from others. We want to give influential decision makers a critical edge by connecting them to a dynamic network of recycling and reclaiming data, industry contacts and live prices.

The project was funded by the LIFE Programme of the European Union. The consortium behind Retradeables consists of expert partners from different EU members states – including, Daikin Europe, MAT4NRG (The Society for Materials and Energy Applications) and the National Technical University of Athens (NTUA).

The European Green Deal

Climate change and environmental degradation are an existential threat to Europe and the world.

To overcome these challenges, Europe needs a new growth strategy that will transform the Union into a modern, resource-efficient and competitive economy, where:

- ✓ there are no net emissions of greenhouse gases by 2050
- ✓ economic growth is decoupled from resource use
- ✓ no person and no place is left behind

The European Green Deal is our plan to make the EU's economy sustainable. We can do this by turning climate and environmental challenges into opportunities and making the transition just and inclusive for.

Our goal

To provide industry players a beneficial solution as the EU aims to achieve carbon neutrality by 2050

The refrigeration and air conditioning industry is under pressure to balance increased global demand along with tightening regulatory pressures. In addition, the high costs of the proper disposal of used and old F-gases mandated by regulations has also caused another industry and environmental issue, the illegal disposal or release of used F-gases into the atmosphere.

Retradeables was established to meet these industry challenges with a responsible alternative of a viable circular economy for used F-gases, while also promoting a simple process of used F-gas recovery and disposal.

F-gases will no longer be a waste and a cost-burden but a profitable asset for installers and distributors

Full transparency and fair pricing, driven by market demand, gas type, quality and quantity

Who is it for?

How does it work?

The Recover, Reclaim, Recycle, Reuse cycle

Selling used F-gases

Users can connect with other installers and distributors by putting their F-gases for sale. Through the platform they can enter an estimation of the used-gas' grade, enter the price they would like to sell them for and wait for another user to make an offer.

Buying F-gases

Users can browse through available used F-gases based on quantity, grade and location and make a bid for the F-gases they would like to purchase. Once the seller approves their bid and a deal is made they can arrange the collection.

The Retradeables platform

F-gas management in one place

Complete market overview

Through the platform's Sales Center users can find everything they need to initiate and complete a gas trade . They also have a live view of refrigerant available in the market based on type and quantity as well a view on all their current F-gas offers and bids.

Simple and secure payments

Within the Retradeables platform users have an e-wallet used for all their payments provided by MANGOPAY. MANGOPAY is the payment provider for the Retradeables platform, adhering strictly to EU anti-fraud regulations and procedures.

Proper disposal management

Aside from buying and selling used F-gases, through Retradeables users can also list used gases in need of disposal. Installers and distributors provide competitive pricing to arrange the collection and appropriate disposal of C-grade and lower quality F-gases.

Multiple users

Under company accounts users can have multiple logins for their employees and partners allowing them to share information across their company with ease.
